ProjectName	**Implement Client Script & UI Policy (Incident)**
Maximum Marks	3 Marks

Requirements Analysis
Implement Client Script & UI Policy (Incident)

2.1 Functional Requirements

- FR-01: The solution shall operate on the ServiceNow Incident table.
- FR-02: An active High Impact Control UI Policy shall be configured with Impact = 1 – High.
- FR-03: Assignment Group shall become mandatory when the High Impact condition is met.
- FR-04: Urgency shall become read-only when Impact is High and the behavior shall reverse when the condition is false.
- FR-05: An onChange Client Script shall automatically set Urgency to High when Impact changes to High.
- FR-06: An onSubmit Client Script shall prevent saving a High Impact Incident when Assigned To is empty.
- FR-07: An onCellEdit Client Script shall prevent direct State changes through list editing.
- FR-08: The configuration shall be tested for mandatory validation, successful save, reverse condition, list-edit blocking, and form-based State update.

2.2 Non-Functional Requirements

- Data integrity
- Usability
- Reliability
- Maintainability
- Responsive client-side validation
- Controlled user interaction

Requirements

2.3 Requirement Analysis Flow

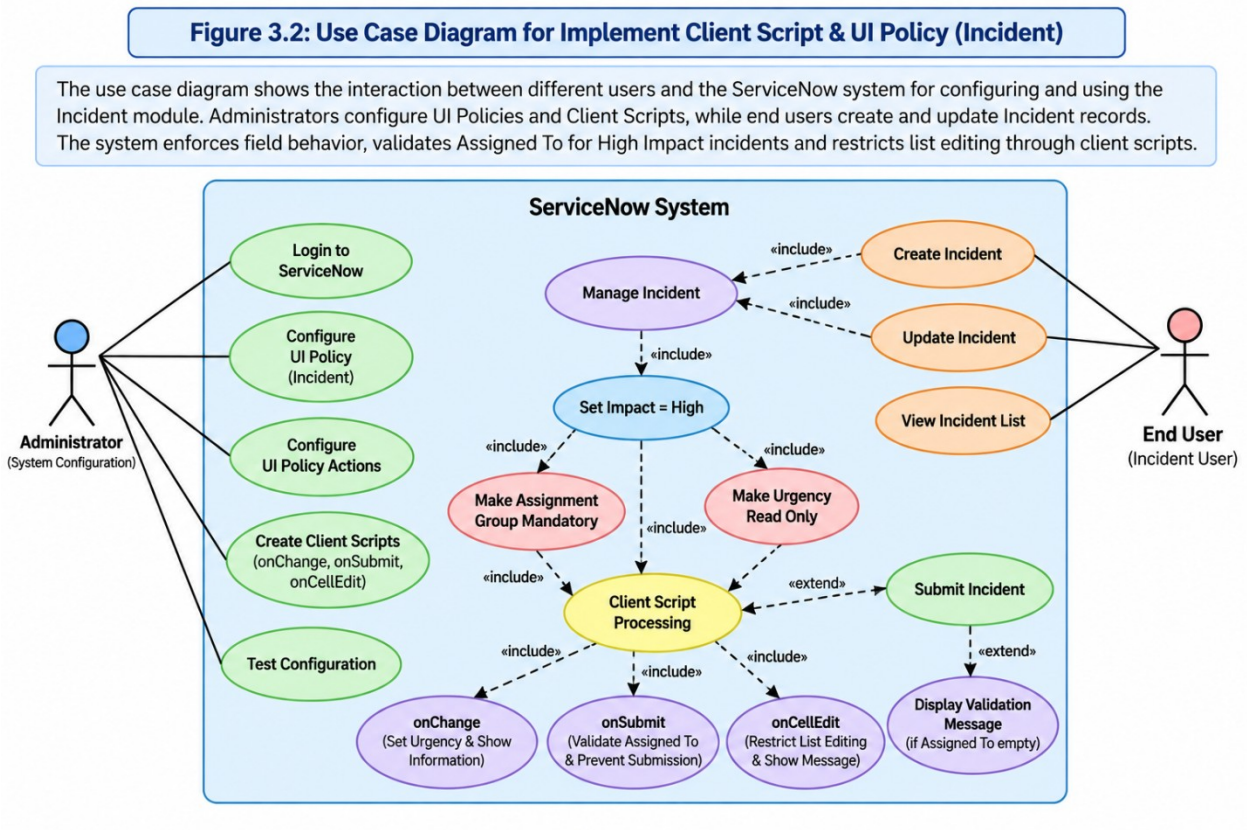

Figure 2.3: Requirement Analysis Flow

The requirements define a lightweight ServiceNow client-side solution that combines UI Policies and Client Scripts to enforce business rules before Incident records are submitted or modified.
