ProjectName	**Implement Client Script & UI Policy (Incident)**
Maximum Marks	3 Marks

Data Flow Diagram (DFD)
Implement Client Script & UI Policy (Incident)

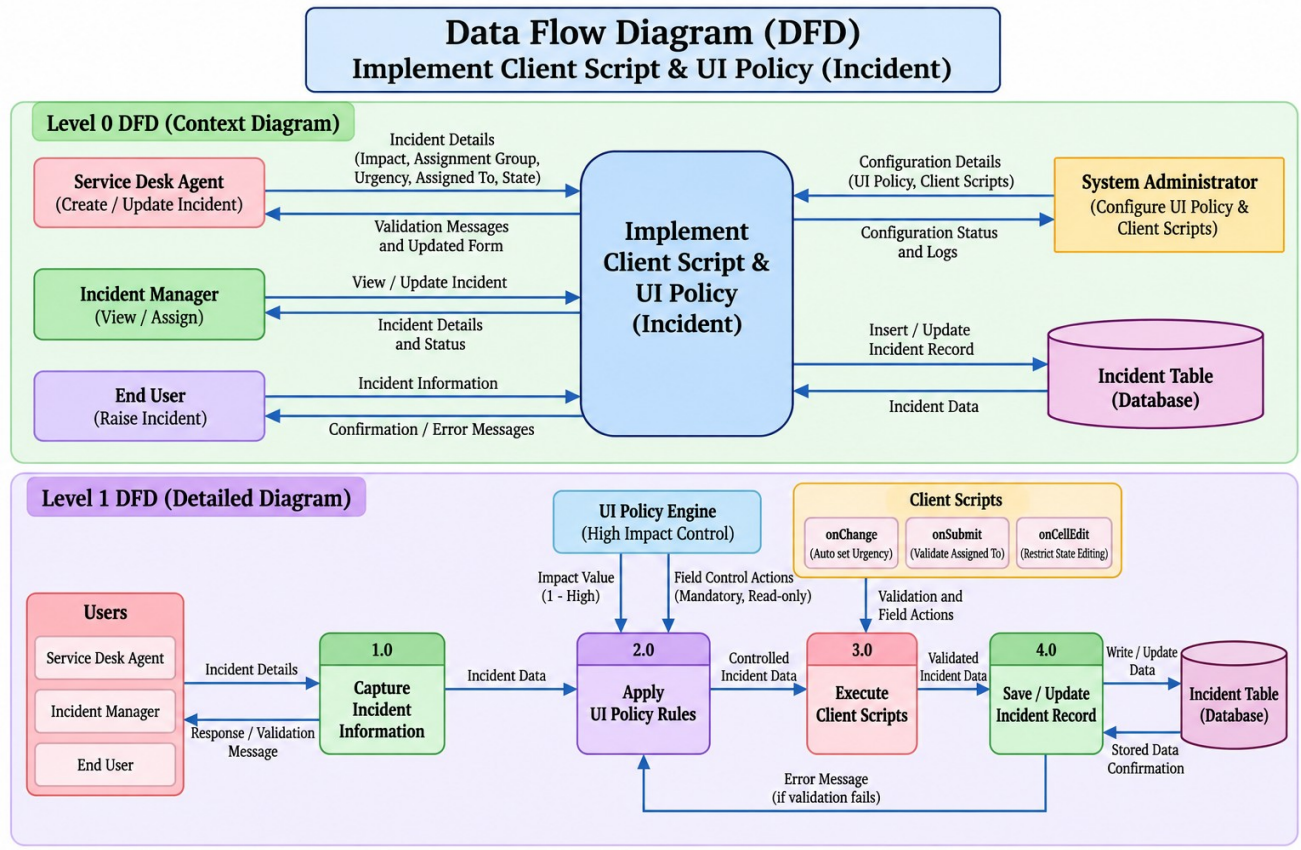

Figure 3.3: Data Flow Diagram for Implement Client Script & UI Policy (Incident)

The DFD shows Incident information moving from users through UI Policy processing and Client Scripts to validated Incident records in the Incident Table. Validation or error messages are returned when configured conditions are not satisfied.

Data Flow Diagram (DFD)

The Data Flow Diagram illustrates how Incident information flows through the ServiceNow system. The **User** enters or updates Incident details through the **Incident Form**. The configured **UI Policies** dynamically control field behavior based on conditions such as High Impact, while the **Client Scripts** perform automation and validation. The system checks the Incident information, including **Impact, Urgency, Assignment Group, Assigned To, and State**, before allowing the record to be saved or updated. After successful validation, the Incident data is stored in the **Incident Database**. The system also provides appropriate messages or prevents invalid updates when validation conditions are not satisfied.
