Test Cases

Date	2-October- 2026
TeamID	6ab46978b5170a9b58b3f461
ProjectName	**Implement Client Script & UI Policy (Incident)**
Maximum Marks	3 Marks

Test Cases
Implement Client Script & UI Policy (Incident)

TC ID	Test Scenario	Steps	Expected Result
TC-01	High Impact Mandatory Validation	Set Impact=High, leave Assigned To empty, click Submit.	Record is not saved and an error is shown for Assigned To.
TC-02	Successful Save	Set Impact=High and select a user in Assigned To, then Submit.	Incident saves successfully.
TC-03	Urgency Auto-Setting	Change Impact to High.	Urgency is automatically set to High.
TC-04	Urgency Read-Only	Set Impact to High and try to edit Urgency.	Urgency is read-only.
TC-05	Reverse Condition	Change Impact from High to Medium.	Assignment Group mandatory behavior and Urgency read-only behavior are reversed.
TC-06	List Edit Blocking	Open Incident list and double-click State.	Alert appears and State is not changed.
TC-07	Form-Based State Update	Open the Incident form, change State and click Update.	State change is saved successfully.

Test Result Summary

The uploaded project content defines these tests to verify mandatory enforcement, successful submission, reverse-condition behavior, list-edit blocking and form-based updates. The expected results confirm that the UI Policy and Client Scripts work together to enforce the configured Incident rules.
