ProjectName	**Implement Client Script & UI Policy (Incident)**
Maximum Marks	3 Marks

Implement Client Script & UI Policy (Incident)

1. Project Overview

Implement Client Script & UI Policy (Incident) is a ServiceNow micro project that demonstrates how **UI Policies, UI Policy Actions, and Client Scripts** can be used to control Incident form behavior, validate data, automate field values, and restrict inappropriate list-based updates. Implement Client Script & UI Po…

2. Objective

The main objective is to improve the consistency and accuracy of Incident records by applying client-side controls. The project demonstrates conditional mandatory fields, automatic field updates, read-only behavior, form validation, and controlled State updates. Implement Client Script & UI Po…

3. Technologies / ServiceNow Features

- ServiceNow Incident Management
- UI Policy
- UI Policy Actions
- Client Scripts
- Incident Form
- Form Validation
- List Editing

4. Implemented Features

Component	Implementation
UI Policy	High Impact Control
Condition	Impact = 1 – High
Assignment Group	Made mandatory for High Impact
Urgency UI Policy Action	Urgency made read-only for High Impact
onChange Client Script	Automatically sets Urgency to High
onSubmit Client Script	Validates Assigned To before submission
onCellEdit Client Script	Prevents State changes through list editing
Reverse Condition	Restores normal field behavior when Impact is not High

README

The above configurations are documented in the project implementation instructions. Implement Client Script & UI Po… Implement Client Script & UI Po… Implement Client Script & UI Po…

5. Client Scripts

onChange

When **Impact** is changed to High, the script sets **Urgency** to High and displays an information message. Implement Client Script & UI Po…

onSubmit

When Impact is High and **Assigned To** is empty, the script prevents submission and displays an error message. Implement Client Script & UI Po…

onCellEdit

The script prevents users from changing **State** through list editing and instructs them to open the Incident form. Implement Client Script & UI Po…

6. Testing

The project includes testing for:

1. Mandatory validation of Assigned To.
2. Successful Incident submission.
3. Reverse condition when Impact changes from High.
4. Blocking State updates through list editing.
5. Allowing State updates through the Incident form. Implement Client Script & UI Po…

7. Expected Outcome

The completed project provides controlled Incident form behavior through UI Policies and Client Scripts. It helps ensure that required information is provided, appropriate field values are automatically handled, and restricted list-based operations are prevented.

8. Project Structure

10. Conclusion

This project demonstrates the practical use of ServiceNow **UI Policies and Client Scripts** to implement dynamic field behavior, automated updates, validation, and controlled Incident processing. The completed configuration and testing activities demonstrate how client-side controls can support consistent Incident data entry and user interaction. Implement Client Script & UI Po…
