ProjectName	**Implement Client Script & UI Policy (Incident)**
Maximum Marks	3 Marks

Demonstration Guide

Implement Client Script & UI Policy (Incident)

1. Introduction

This Demonstration Guide explains how to demonstrate the completed **Implement Client Script & UI Policy (Incident)** project in ServiceNow. The demonstration covers the configured UI Policy, Urgency control, Client Scripts, validation, reverse condition, and State update restrictions. Implement Client Script & UI Po…

2. Demonstration Preparation

Before starting the demonstration:

1. Log in to the ServiceNow instance with the required access.
2. Navigate to the **Incident** module.
3. Keep the configured UI Policy and Client Scripts active.
4. Open an existing Incident or select **Incident → Create New**.
5. Prepare the project screenshots and demonstration video for recording.

3. Demonstrate High Impact UI Policy

Procedure

1. Open the Incident form.
2. Locate the **Impact** field.
3. Select **1 – High**.
4. Observe the Incident form.

Expected Result

The **High Impact Control** UI Policy is triggered. The **Assignment Group** field becomes mandatory, demonstrating the conditional behavior configured for High Impact Incidents. Implement Client Script & UI Po…

Demo narration:

Demonstration Guide

"Here I am setting the Impact field to High. The High Impact Control UI Policy is now triggered, and Assignment Group becomes mandatory."

4. Demonstrate Urgency Control

Procedure

1. Keep Impact set to **High**.
2. Observe the **Urgency** field.
3. Verify that Urgency is automatically set to High.
4. Attempt to modify the Urgency field.

Expected Result

The onChange Client Script sets Urgency to High and displays an information message. The UI Policy Action makes Urgency read-only while the High Impact condition is active. Implement Client Script & UI Po… Implement Client Script & UI Po…

Demo narration:

"When Impact is High, the onChange Client Script automatically sets Urgency to High. The UI Policy Action also controls the Urgency field as read-only."

5. Demonstrate onSubmit Validation

Procedure

1. Keep **Impact = High**.
2. Leave **Assigned To** empty.
3. Click **Submit**.

Expected Result

The Incident should not be submitted. The onSubmit Client Script displays an error indicating that Assigned To is mandatory for a High Impact Incident. Implement Client Script & UI Po…

Demo narration:

"I have left Assigned To empty and selected Submit. The onSubmit Client Script detects the missing value and prevents the Incident from being saved."

6. Demonstrate Successful Save

Procedure

1. Select a valid user in **Assigned To**.
2. Keep the required Incident information completed.
3. Click **Submit**.

Demonstration Guide

Expected Result

The Incident should save successfully without the Assigned To validation error. Implement Client Script & UI Po…

Demo narration:

"Now I have provided a value in Assigned To. I will submit the Incident again, and the record is saved successfully."

7. Demonstrate Reverse Condition

Procedure

1. Open the Incident.
2. Change **Impact** from High to **Medium**.
3. Observe Assignment Group and Urgency.

Expected Result

The High Impact UI Policy condition is no longer satisfied. Assignment Group should no longer be mandatory, and the Urgency read-only behavior should be reversed. Implement Client Script & UI Po…

Demo narration:

"I am changing Impact from High to Medium. The High Impact condition is now false, so the configured UI Policy restrictions are reversed."

8. Demonstrate onCellEdit Restriction

Procedure

1. Navigate to **Incident → All**.
2. Locate an Incident.
3. Attempt to change the **State** directly from the list.
4. Observe the resulting message.

Expected Result

The onCellEdit Client Script blocks the list-based State update and instructs the user to open the Incident form. Implement Client Script & UI Po…

Demo narration:

"Here I am attempting to change State directly from the Incident list. The onCellEdit Client Script blocks the update and instructs me to open the Incident form."

Demonstration Guide

9. Demonstrate Form-Based State Update

Procedure

1. Open the same Incident record.
2. Locate **State**.
3. Select the required State value.
4. Click **Update**.

Expected Result

The State change should be saved successfully when performed through the Incident form. Implement Client Script & UI Po…

Demo narration:

"Instead of changing State from the list, I have opened the Incident form. The State can now be changed and the record can be updated successfully."

10. Complete Demonstration Sequence

Use the following sequence when recording your **Demo_Project.mp4**:

```
START
  ↓
Open Incident
  ↓
Set Impact = High
  ↓
Assignment Group becomes Mandatory
  ↓
Urgency automatically becomes High
  ↓
Urgency becomes Read-Only
  ↓
Leave Assigned To Empty
  ↓
Submit
  ↓
Validation Error
  ↓
Enter Assigned To
  ↓
Submit Successfully
  ↓
Change Impact = Medium
  ↓
Verify Reverse Condition
  ↓
Open Incident List
  ↓
Try State List Edit
  ↓
Update Blocked
```

Demonstration Guide

```
  ↓
Open Incident Form
  ↓
Change State
  ↓
Update Successfully
  ↓
END
```

11. Demonstration Checklist

No.	Demonstration Activity	Status
1	Open/Create Incident	☐
2	Set Impact = High	☐
3	Verify Assignment Group mandatory	☐
4	Verify Urgency auto-setting	☐
5	Verify Urgency read-only	☐
6	Test Assigned To validation	☐
7	Test successful submission	☐
8	Test Reverse if false	☐
9	Test State list-edit blocking	☐
10	Test form-based State update	☐

Demonstration Deliverables
